

Thank you for affording me a place to make comments.

I am opposed to RM-11305, below are listed a few thoughts that shaped my option.

Even if I wish everyone would adopt and live by “gentleman’s rules” like band plans, I know it will never happen without some regulation. It is almost impossible for 10 people to agree on anything, how are you going to get 700,00 Amateur Radio operators to come up with a workable, ENFORCEABLE plan.

The cost of chaos in, time and money, by the Commission would be staggering.

An analogy: why not remove all the stop signs from our roads, aren’t we all gentleman?

I dispute the suggestion that the voice subbands are over crowded as just not true.

Sometimes, like during contests, crowding is a problem, it’s during these crowded times self-control will be thrown to the wind. This is where a little regulation, plays a big roll. I might mention I am a contester, and would love to have the ‘run’ of the entire band, but not at the expense of all the other activities taking place at the same time.

I also find in Appendix A, “an analysis of band occupancy by mode” makes for interesting reading, but as stated by the author, a Snap Shot! A snap shot on one isolated day at one isolated location, propagation alone would render any observations made very limited at best.

Please deny RM-11305
